

RAJASK

THE AI CEO OPERATING SYSTEM

User Guide & Operating Manual

The sovereign command center for your entire realm

rajasks.netlify.app

Welcome to RAJASK

RAJASK is your **CEO Operating System** — a single, sovereign command center from which you run your entire realm: the people in your court, the companies you own, every channel of communication, the work you delegate and approve, the reports you need, and the live pulse of the whole operation.

The single mandate: the CEO never forgets, never misses, never loses visibility, and never becomes the bottleneck.

Everything in RAJASK is organised as **the Regalia** — a set of 19 permission-gated subsystems, each with its own colour drawn from the RAJASK mark. This guide walks you through getting in, taking your throne, and commanding each subsystem.

1 • Getting Started

Three steps take you from the sign-in screen to a fully operational throne:

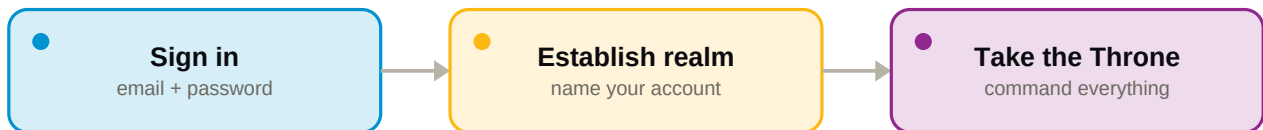

Figure 1 — First-run flow

- **Sign in** at rajasks.netlify.app. New here? Choose **Create account**, then confirm via the email we send.
- **Establish your realm** — give it a name (e.g. your company or family-office name). You are invested as its **Sovereign** with unrestricted authority.
- You land on **The Throne** — your command dashboard. The left rail (the Regalia) is your map to every subsystem.

The Throne — your command dashboard

The Throne surfaces what needs you: live counts of members, titles, companies and audit events, quick links into the Court, and a grid of widgets (agenda, approvals, reports, tasks, team health) that fill in as you use each subsystem.

2 · The Regalia — your subsystems

Each subsystem owns one domain. You only see what your **title** permits.

● THRONE	Command dashboard — everything at a glance
● VIZIER	AI chief of staff (ask anything about the realm)
● REALM	Companies, subsidiaries & OKRs
● COURT	Members, titles & permissions
● COURIER	Chat, calls & WhatsApp — unified comms
● COUNCIL	Meetings — agenda, minutes, follow-ups
● HERALD	Broadcasts & proclamations to the realm
● WRIT	Delegation — assign & track decrees (tasks)
● SEAL	Approvals & spending authority (DOA)
● EDICT	Automation — standing rules
● ALMANAC	Calendar, scheduling & travel
● VAULT	Documents, contracts & e-signature
● CHANCERY	Reports & briefings
● CHRONICLE	Analytics, engagement & pulse surveys
● CODEX	Decision register & risk register
● TREASURY	Financial visibility (revenue, cash, expenses)
● PRIVY	Your private sphere — walled off from the company
● CONDUIT	Integrations, API keys & webhooks
● WARD	Security & the append-only audit log

3 • How permission works

Every action is checked the same way. A member holds a **title** (e.g. Director); the title carries a default **permission matrix** (subsystem × action). The Sovereign can override any cell, and grant or deny individual rights with optional time limits and spending caps.

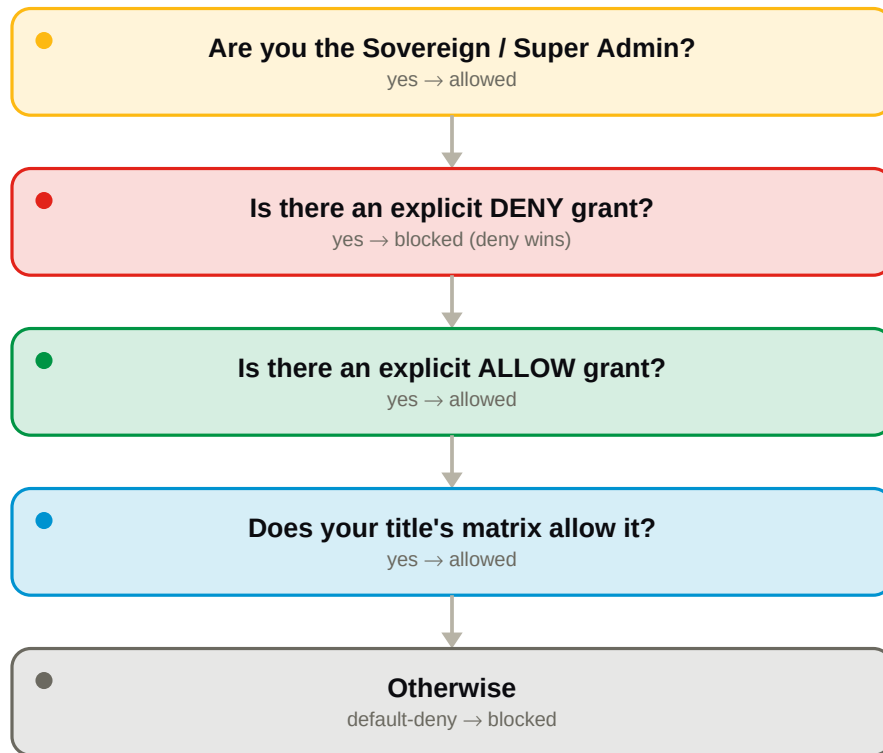

Figure 2 — How a permission is resolved

Manage all of this in **Court** → **Titles & permissions**: pick a title and toggle any subsystem/action cell. Changes apply instantly.

4 • Court — admit people to your realm

The Court is who is admitted and the rights they hold.

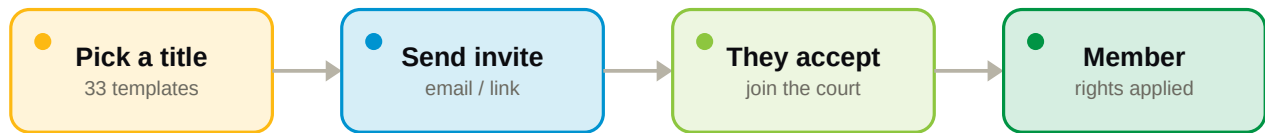

Figure 3 — Inviting a member

- Open **Court**. Under **Admit to the court**, choose a title and channel, add an email or note, and send.
- The invitee opens the link, signs in, and accepts — they instantly hold the invited title.
- Suspend, restore or re-title members from the directory. High-privilege grants route through SEAL.

5 • Courier — communicate

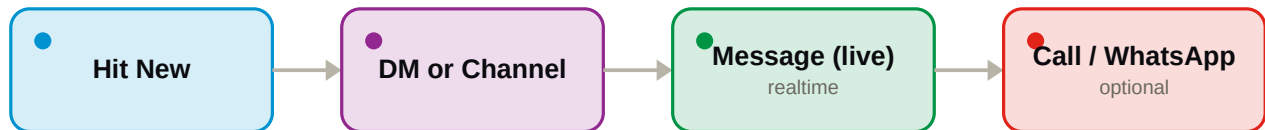

Figure 4 — Starting a conversation

- **New** → **Direct message** picks a member; **New channel** opens a named room.
- Messages are realtime with presence, typing, edit and recall. Read state shows unread dots.
- Use **Call** for LiveKit voice/video (once keys are configured). Inbound WhatsApp lands in-thread via the bridge.

6 · Writ & Seal — delegate and approve

Turn intent into tracked, accountable execution — then authorise what matters.

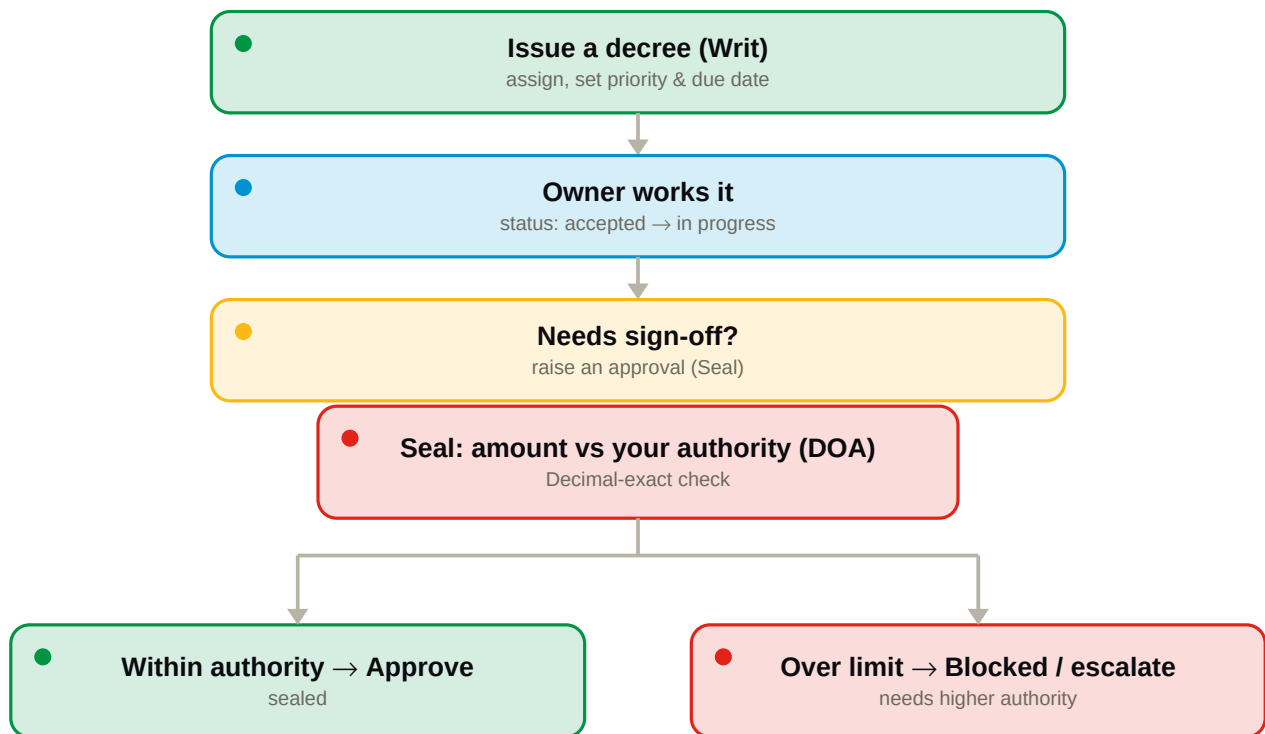

Figure 5 — Delegation into approval, with spending authority

- **Writ:** create a decree, assign an owner, set priority/budget/due date, and track it through its lifecycle.
- **Seal:** submit payments, purchases, contracts, hiring, etc. Approvers can only approve up to their delegated monetary authority — enforced exactly (no rounding).

7 • The rest of the Regalia

Council • Vault • Almanac • Herald

- **Council** — convene meetings with an agenda; capture minutes and status.
- **Vault** — register contracts, SOPs, board packs; track e-signatures by signer.
- **Almanac** — add events (meeting / travel / board / personal) with visibility scoping.
- **Herald** — draft a proclamation, target everyone or a title, and **Proclaim** to fan it out with read tracking.

Chancery • Chronicle • Codex • Treasury

- **Chancery** — create a report and **Generate** it to snapshot live realm metrics.
- **Chronicle** — watch engagement (members, activity, messages) and run pulse / NPS surveys.
- **Codex** — log decisions (with expected vs actual outcome) and risks (likelihood × impact severity).
- **Treasury** — record revenue / cash / expense snapshots and submit expenses; all amounts are Decimal-exact.

Vizier — your AI chief of staff

- Open **Vizier** and ask in plain language: “What needs me today?”, “Summarise open risks”.
- Answers are **grounded** in a live snapshot of your realm — VIZIER never invents figures.
- Requires an Anthropic API key; until then it returns your live realm snapshot.

8 · Security, audit & super-admins

- Every table is private by default (default-deny) and every change is written to an **append-only audit log** — view it in **Ward**.
- **Super-admins** (platform-wide) are granted to allow-listed emails and can oversee across realms.
- **Privy** is your private sphere: owner-only, never visible to the company, and excluded from the audit and analytics.

9 · Quick reference

I want to...	Go to
Add a teammate	Court → Admit to the court
Change who can do what	Court → Titles & permissions
Message / call someone	Courier
Assign a task	Writ
Approve a payment	Seal
Schedule a meeting / trip	Council / Almanac
Store a contract	Vault
Announce to everyone	Herald
Build a report	Chancery
Track decisions / risks	Codex
See the money	Treasury
Ask the AI	Vizier
Review the audit log	Ward

RAJASK — the seat from which your entire realm is seen, commanded, and remembered.
